

INSECTS

In fact, they have no bones at all!

Some insects have to molt in order to grow bigger. This means they grow a new exoskeleton under their current one. When the new one is ready, they shed their old exoskeleton and leave it behind!

Insects have a hard
exoskeleton.

Insects are
invertebrates.
They have **NO**
backbone!

6 legs.

Insects have

3 main body parts

2 antennae.
